HEADLINE: PlotSpike Introduces Shade Tolerant Seeds for Food Plots

BODY:

PlotSpike, producers of seed and attractants for wildlife food plots, has introduced a shade tolerant seed blend for food plots. PlotSpike Shade Blend is blended to work in moderate shade and can be established with minimum tillage. PlotSpike Shade Blend is a cool season blend that will work anywhere there is adequate soil moisture and at least 4 hours of sunlight. PlotSpike Shade blend is a blend of perennial plants that will survive the summer in most areas of the United States and will provide grazing during the Fall and Spring in all areas that have adequate rainfall.

"We saw a need for an easy to establish blend that would work in shady areas" said Mike Massey, director of PlotSpike. "This blend allows food plots in such areas as road beds, thin timber, around small clearings and on field edges. Soil preparation is easy and can be done with hand rack on small plots."

PlotSpike guarantees all their seed blends. For more information on Shade Blend and all the other PlotSpike products visit www.plotspike.com.
